DETAILED ACTION

1. This Office Action is a response to communications dated 10/01/02. Claims 1-6 are pending in the application.

Specification

2. The disclosure is objected to because of the following informalities:

Page 9, "Figures" should be deleted.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Bennett et al (Patent Application Publication 2002/0112014) (hereinafter "Bennett").

Regarding **claim 1**, in accordance with Bennett reference entirety, Bennett discloses a method of chatting via a cellular phone system (*Fig. 1a*) comprising a processor (42a or 42b) connected to an Internet web (24) which supports network chatting (SMS) (*page 3, paragraph [00025] and thereinafter*), and a plurality of nodes

(46a, 46b and 46c) connected to the processor ((42-44)a or (42-44)b) for wirelessly communicating with a plurality of cellular phones (50a, 50b and 50c), the method comprising:

connecting the plurality of cellular phones wirelessly to the plurality of nodes (see Fig. 1A for connection details of devices 50a, 50b and 50c), and connecting to the Internet web (24) via the processor ((42-44)a or (42-44)b);

sending a message (*SMS message*) from one (50a) of the plurality of cellular phones wirelessly to one (50b) of the plurality of nodes, and sending the message from the node (46a) to the Internet web (24) via the processor ((42-44)a) (paragraph [0036]); and

sending the message via the processor (42a) to the plurality of nodes (42a and 42b), and sending the message from the plurality of nodes to the plurality of cellular phones (50a and 50b) (paragraph [0037]).

Regarding **claim 2**, in addition to features recited in base claim 1 (see rationales discussed above), Bennett further discloses wherein the plurality of nodes (46a, 46b and 46c) are base stations (*Fig. 1A depicts elements 46a, 46b and 46c as base stations*).

Regarding **claim 3**, in addition to features recited in base claim 1 (see rationales discussed above), Bennett further discloses wherein the processor comprises a register (not shown; it is inherent there is memory or buffer for holding e-mail messages in 42a, 42b) for holding messages from the plurality of cellular phones in turn (paragraphs

Application/Control Number: 10/065,293 Page 4

Art Unit: 2616

[0052] to [0057] and thereinafter discussed the structure and functionalities of gateways 42a, 42b and 42c).

Regarding **claim 4**, in addition to features recited in base claim 3 (see rationales discussed above), Bennett further discloses wherein the register is a first-in-first-out (FIFO) memory (not shown; inherent in the gateway because e-mail messages are processed based on a first come first serve, commonly implemented using a FIFO).

Regarding **claim 5**, in addition to features recited in base claim 1 (see rationales discussed above), Bennett further discloses wherein the processor is a mobile switching center (*Fig. 1A depicts 44A, 44b or 44c as a mobile switching center*).

Regarding **claim 6**, in addition to features recited in base claim 1 (see rationales discussed above), Bennett further discloses wherein each cellular phone comprises a memory for storing a plurality of phone numbers and data sent from the processor via the corresponding nodes (*paragraph [0025] and thereinafter, Bennett discusses mobile device in the instant invention is a cellular phone, pager, wireless hand-held organizer and the like. These devices inherently have memory for storing phone numbers as well as storing SMS messages*).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
